SUMMARY

Junior security and GRC analyst candidate with hands-on exposure to auth, role-based access, RLS, audit logs, secret scanning, dependency audits, CI gates, documentation, and QA validation. Strong fit for entry-level GRC, security compliance, SOC-adjacent, and application security support roles.

SKILLS

Security/GRC: access controls, audit logs, security documentation, risk notes, compliance-minded QA, secret scanning, dependency audits

Application Security: auth flows, JWT/OAuth concepts, Supabase RLS, role permissions, secure configuration, webhook validation

Operations: incident notes, evidence collection, control validation, release checks, ticket updates, escalation

Technical: AWS fundamentals, GitHub, CI/CD, Docker basics, APIs, SQL/Postgres, browser dev tools

EXPERIENCE

Security-Aware QA / Developer | Sage Ideas

2024-Present | Remote

- Built and validated auth, RLS, audit-log, billing, document-sharing, client portal, and admin workflows in a production SaaS application.
- Supported secret scanning, dependency audits, CI checks, release validation, and secure configuration review across software projects.
- Wrote documentation, test cases, runbooks, and validation notes for access-sensitive workflows.
- Tested role-based behavior, protected routes, API access, portal permissions, and customer-facing security-sensitive flows.

Senior Analyst & Full-Stack Developer | HighStrike

2021-2026 | Remote

- Supported fintech workflows requiring accuracy, confidentiality, data consistency, stakeholder communication, and clear documentation.

SELECTED PROOF

Sage Ideas Studio: auth, RLS, protected routes, audit logs, document sharing, Stripe workflows, admin permissions, portal access.

Nexural Automation: secret scanning, dependency audits, CI gates, schema validation, contract tests, and safety checks.

Nexural Research: response validation, source-grounded outputs, API checks, Docker/Kubernetes packaging, and release gates.
